

DGFT Signer Help

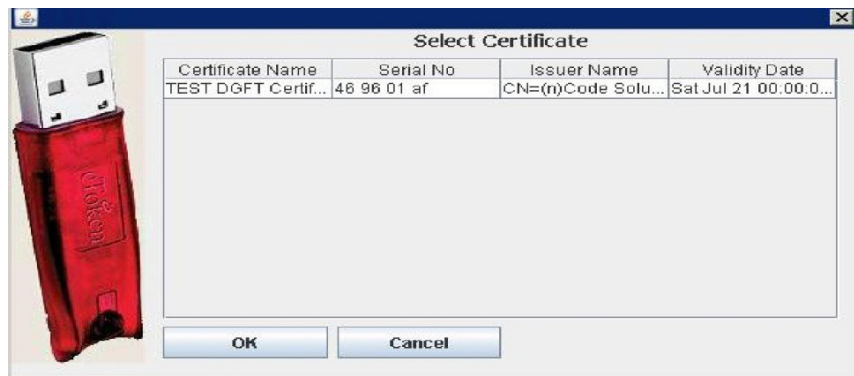

Step-1: After successfully creation **DGFTSigner** folder (e.g **C:\ DGFTSigner**), EPC user has to copy its **xml** file to input file folder (e.g. **C:\ DGFTSigner \IN**) for signing purpose.

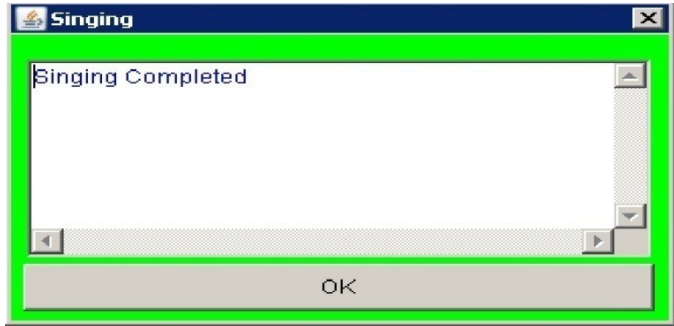

Step-2: Now, User has to open the **DGFTSigner** folder and double click **XmlSigner.bat** file. Then following screen automatically appears with XML files available in input

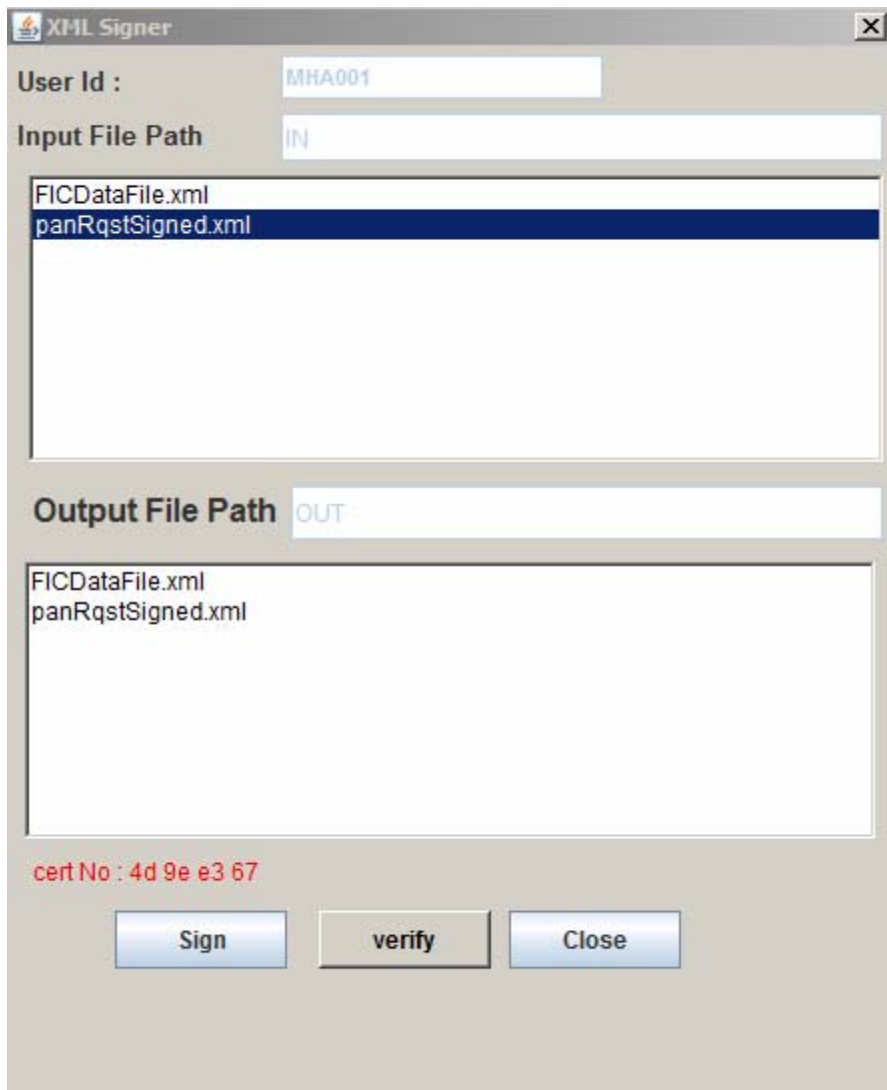

Step 3: Now User has to select the xml file and click on sign button and select the desired certificate name and click on **OK** button as appears below:

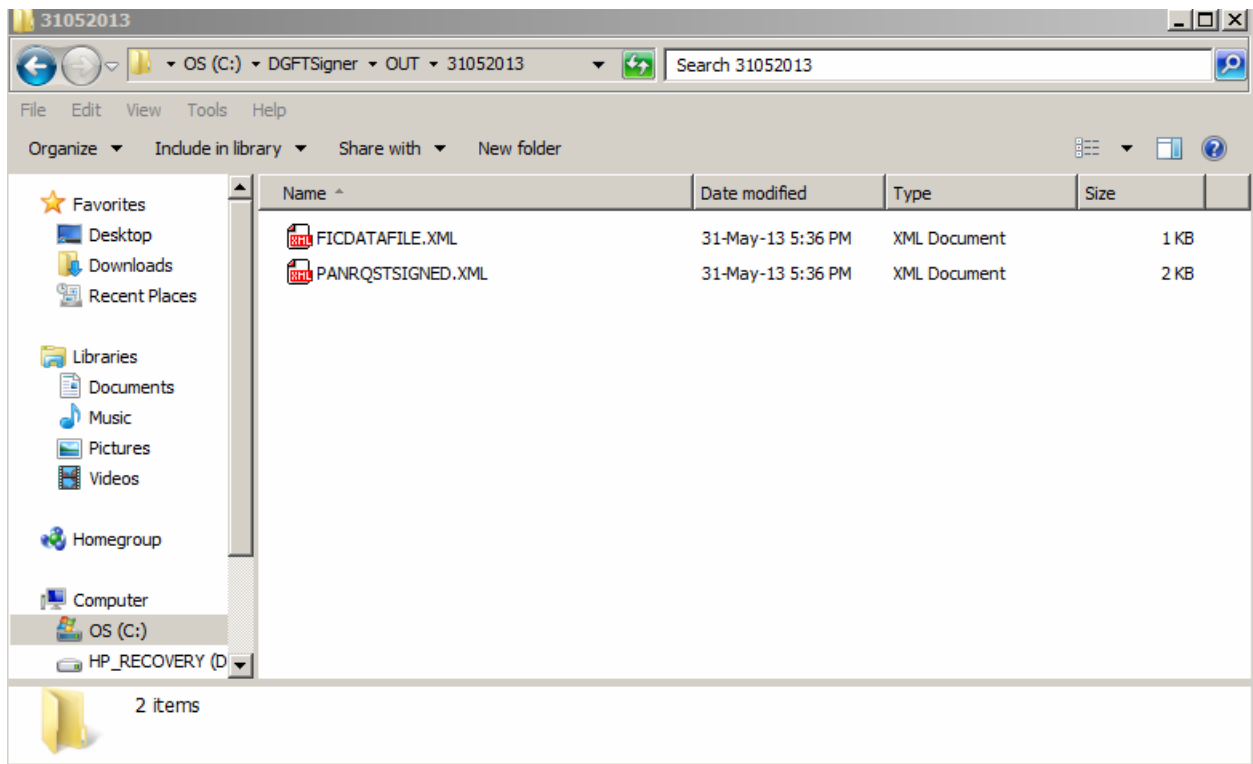

Step 4: The following screen will appear which indicates that **xml** file is **signed digitally**. Now, click on **OK** button.

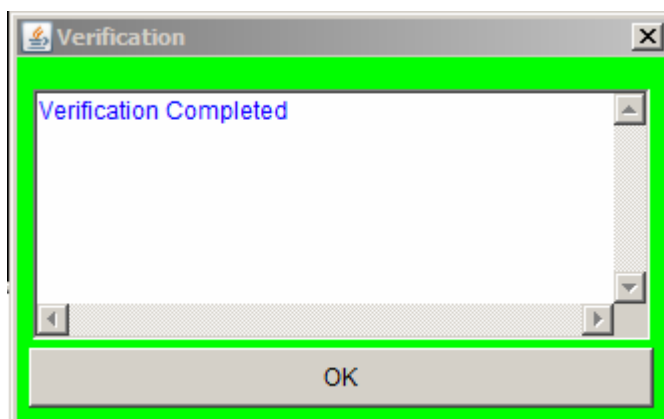

Step 5: After signing process is completed and following screen will appear in which the input file list will automatically appear in the output file list.

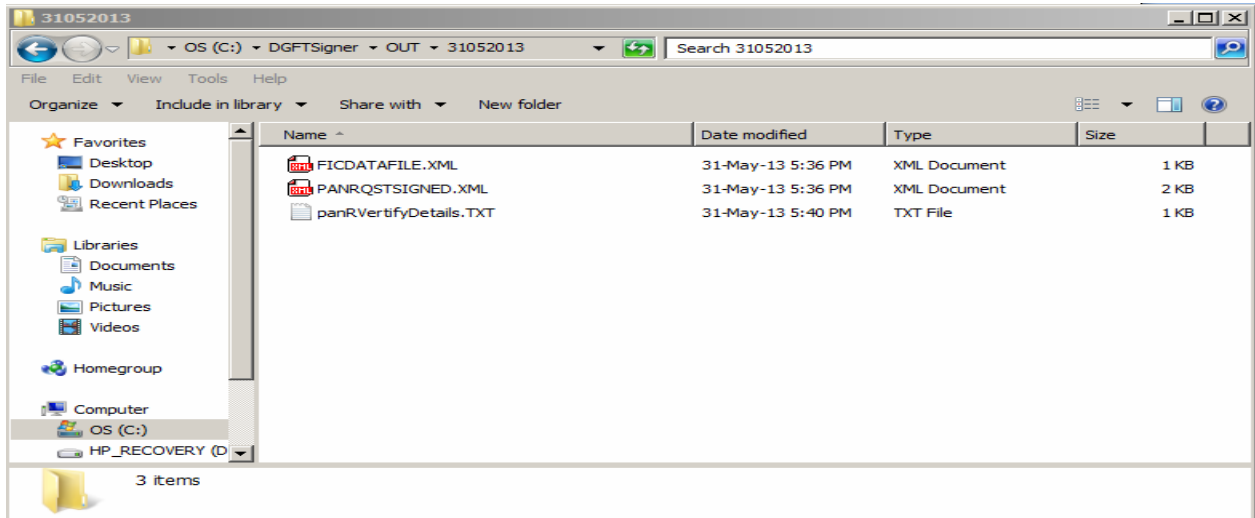

Step 6: Digitally signed xml file is automatically copied in a folder named as current date in the output file folder (e.g. C:\ DGFTSigner\OUT\31052013).

Step 7: User may verify its signed xml file by clicking on verify button. The following screen will appear.

Step 8: On clicking the **OK** button **panRVerifyDetails.TXT** file will be created in a folder named as current date in the output file folder.

Step 9: panRVerifyDetails.TXT file will contain User's digital signature information.
